

Free 6-week Summer Science program for High School Juniors

The Summer Science Program (SSP) is an exhilarating 6 week experience in which high school students, working in teams, learn how to apply physics and calculus to determine the orbit of an asteroid from their own observations. **State funding covers all costs for New Mexico residents to attend SSP. Other sponsors include New Mexico Tech and Sandia National Laboratory/Lockheed Martin.**

Campuses at

*New Mexico Tech in Socorro

*Ojai, California.

Comment from student: “SSP remains the most academically cohesive and intense education experience I have ever had. That I suspect is true for most who are fortunate enough to attend it. “If it weren’t for SSP my vision would be narrower, my aspirations less ambitious and my life less rich.”
